E-Contact List Management System

## Technology/Method
1. Flutter
2. Firebase Realtime Database

Objectives
1. To enhance the efficiency of finding contact person information
2. To design an application that enables a user to view, manage and search information of contact person systematically
3. To test and validate the efficiency of the proposed e-contact list management system

Problem Statement
1. People must manage the business card of others physically
2. People must reprint the business card if they want to make some amendments to the information
3. Contact details is not centralized
4. People must frequently update their contact information of other people if they had changed their own information details
