Restaurant Dine-In & Reservation Management System

TWT Food Paradise

Dashboard

Admin — Database — RESTAURANT

Edit Menu — Manage Payments — Manage Coupons — Manage Orders — Manage Users
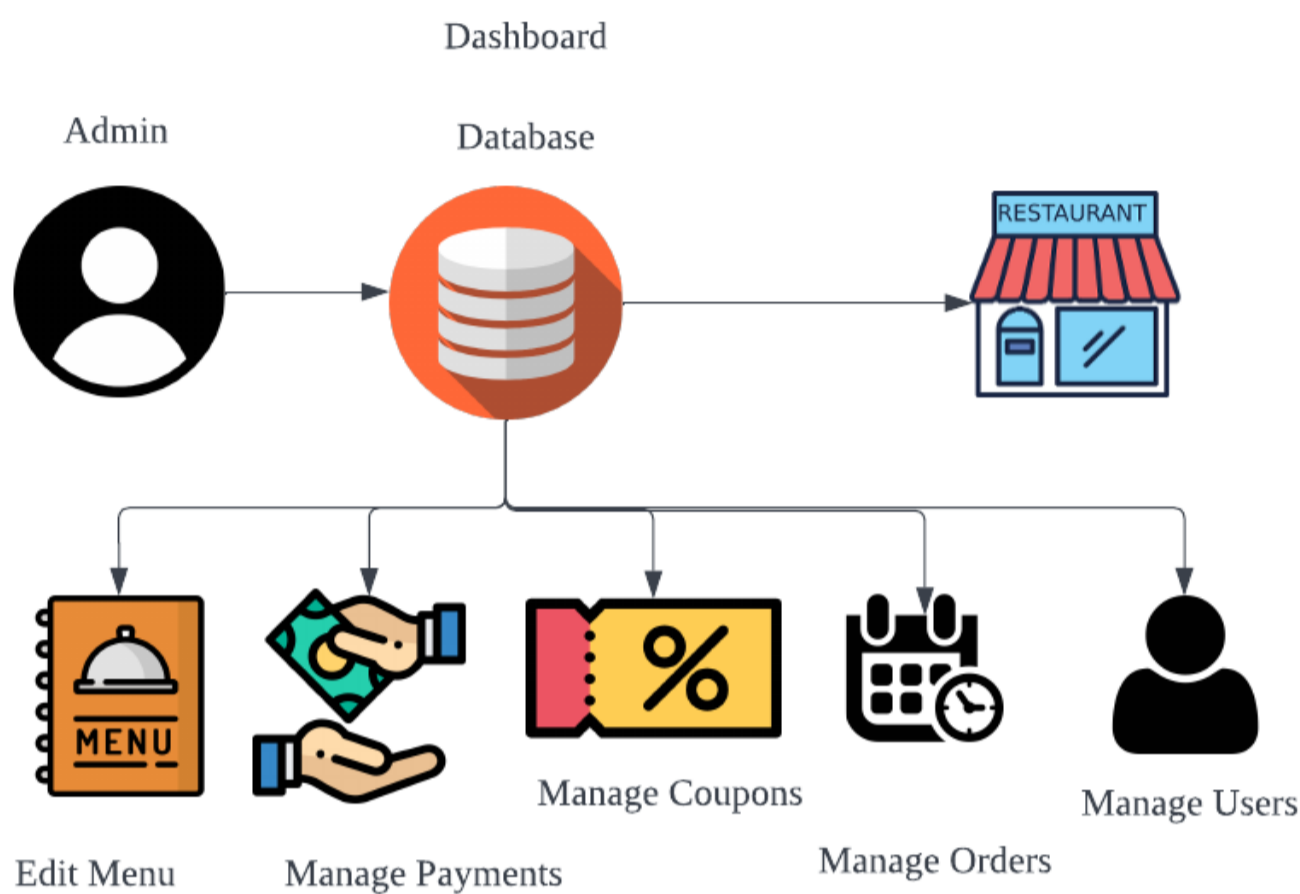

Overview

The system is a restaurant dine-in reservation and ordering system where customers can choose what they want to eat once they arrive and have the options to pay in advance or pay at the counter. As for the admin, they can update the menu by adding, removing, and editing them such as their prices, photos, and descriptions

**Front-End:**
- HTML
- CSS
- Bootstrap

Back-End:
- PHP
- JavaScript

Framework:
- Laravel

Database:
- MySQL

User/Customer — Login — Choose their dishes — Set the time — Checkout

Payment

Apply Coupon

Restaurant receves the order — Kitchen recevies the order — Chef prepares the food

Waiter serves it to customer

Sends out the food

Scope

The purpose of the system is to ease the ordering process for both the customer and the restaurant employees. One thing to keep in mind is that not all users are tech savvy or illiterate when using their smart phones or even navigating a webpage itself.
